Vermeer® BW5500 Bale Wrapper

:60 Second Radio:

Everyone knows protecting your hay helps maintain high quality feed for your livestock. What some may not know is that Vermeer has a way to help. With the all new BW5500 inline bale wrapper, large producers and custom operators now have a tool to help wrap more hay in a day while preserving forage quality.

The Vermeer BW5500 can help wrap bales faster and it requires less frequent film loading, thanks to the three plastic film pre-stretchers compared to two stretchers on most competing models.

You can also better prevent spoilage with the simple precision controller, which allows for consistent wraps with automatic adjustments, depending on the environment you're in. The BW5500 does all this while helping to reduce the amount of plastic being used.

Faster wrapping times and more operational control. That's what the BW5500 inline baler wrapper from Vermeer is about. Go ahead. Let us help you line 'em up. Stop by _____(Dealership name)_____ in _____(location)____ today and see the BW5500 for yourself.
